In our interface we have provided with 2 options to enter our application, i.e., 1. Manager, 2. Customer

Manager can have all the admin access to the database, that is giving discount, cashbacks, editing the database, having statistical information of the database and many more

The customer can explore the catalogue of the products with the mentioned categories, and buy them mentioning the category

For that we have designed a good command line-based interface, where you have access to every point at any time and you can go back at any time.

There are various options when you login as an existing user or create a new customer profile, that include:

```
